Residential Green Brochure
As part of a company that delivers water every day through millions of faucets worldwide, Delta believe there is a better way for people to live with water. But that better way shouldn’t come at the expense of our natural resources.

What does it mean to be responsible and resourceful? It’s a question we don’t take lightly.

To consumers and to the Earth. To provide products that address today’s water conservation concerns in the way we create smart water delivery solutions, so that they maximize water efficiency and the product life span. All without sacrificing the comfort and convenience of the user experience.
WaterSense®-labeled faucets, showerheads and handshowers.
Now that’s smart.

Smart innovations that make a difference.

H₂Okinetic Technology.
Delta’s exclusive H₂Okinetic Technology provides a warmer, more luxurious shower experience. Larger droplets coupled with drenching water coverage create a private sanctuary designed to revitalize and restore. So, saving water is easy with water-efficient models that flow at 1.5 or 2.0 gpm while providing the indulgent feel of 2.5 gpm.

Multi-Flow™ Technology.
The Multi-Flow wand supplies a water-efficient 1.5 gpm, stream or spray. A simple push of the toggle—which stays engaged with just one click—increases the water flow to a higher volume on demand. So, kitchen tasks, like quickly filling a pot or the sink, become easier.

Touch₂O® Technology.
Touch on. Touch off. With Touch₂O Technology, it doesn’t matter if you have two full hands or 10 messy fingers. Tap anywhere on the spout or handle and the water is running. Turning off the water between tasks is easier too, saving water.
Water-efficient faucets for the kitchen.

Did you know?

In 2009, Delta® recycled 1,062 tons of cardboard, 5,218 tons of brass, 47 tons of plastics and 581 tons of other metals during the manufacturing process.
TOUCH₂O® TECHNOLOGY.
TOUCH ON. TOUCH OFF.
Easy to turn on and off between tasks, saving water.

= Water-Efficient Product
= DIAMOND™ Seal Technology
= CA/VT compliant model available to meet California AB1953 and Vermont Legislation S152
All Delta® lavatory faucets flow at 1.5 gpm at 60 psi, including those that are WaterSense® labeled.

As Delta® strives to achieve and increase water efficiency across our lines, we take our role as a WaterSense® partner very seriously. Delta Faucet Company is committed to working with the EPA to encourage efficient use of water resources and actively protect the future of our nation’s water supply.

Delta Faucet is one of the first in the industry to qualify for the new WaterSense program developed by the EPA for showerheads and handshowers.

Delta’s showerheads and handshowers which meet WaterSense requirements use between 20–40% less water* than the industry standard—while our lavatories which meet WaterSense requirements use 32% less**—and all perform as well or better than their less efficient counterparts.

*Based on flow rate for showerheads and handshowers of 1.5 gpm or 2.0 gpm versus Industry Standard ASME A112.18.1/CSA B125.1 of 2.5 gpm.

**Based on flow rate for lavatory faucets of 1.5 gpm versus Industry Standard ASME A112.18.1/ CSA B125.1 of 2.2 gpm.
